String Art is created by connecting points with string.

You can only ever create straight lines when connecting your string from one point to another, however you can sometimes make lines appear to be curved by adding more points along the path, overlapping strings, or using different color strings.

String art is great for making geometric shapes or simple silhouettes. You can “color,” or fill in shapes, by either connecting strings across many points along a border, or wrapping string around itself, similar to weaving.

You can also create interesting layers by overlapping strings.
